Gentlemen:

We very much appreciate the additions you made to our collection of coin operated devices. The two mechanical coin changers are most interesting and the detectors are a good sample of that field's development.

We are very grateful for your cooperation.

Sincerely,

Eric P. Newman

jah

The small 25¢ change machine does not have a cam mechanism and we would appreciate if you could locate one so it will work. The large change machine with the three different slots is missing one metal box for catching the coins. It is 7"x 4"at the base and 2" high on the side. The 3½" spring to pull the cam back in position on one of the changers also is missing. Do you have spares of these parts?
